# How to Upload a Git Project to PhoneGap Build
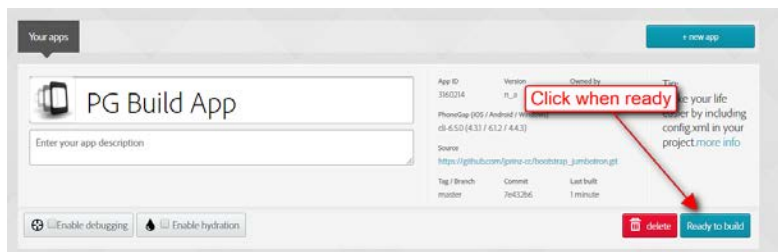

Prerequisites:

- A free Adobe account on the PhoneGap Build website
  (https://build.phonegap.com)
- An existing web project in a GitHub repository
  (https://github.com)
- A config.xml file configured for your GitHub project to work on PhoneGap
  (http://docs.phonegap.com/phonegap-build/)

1. Login to https://build.phonegap.com/
2. Make sure you are on the **Apps** tab, then paste the **URL to your GitHub project** in the textbox.
   The click **Pull from .git repository**.

3. On the next screen, make sure everything is alright then click **Ready to build**.

4. Share the files or the QR code with friends/family!
